Job Tracking System - Presentation Slides

10-Minute Technical Presentation (10-13 Slides)

SLIDE 1: Title Slide

Job Tracking System

Full Stack Web Application

Presented by: [Your Name]

Date: April 2026

Tech Stack: React | Node.js | Express | MongoDB Atlas

SLIDE 2: Problem Statement

The Challenge

For Job Seekers:

- Managing 50+ applications across multiple companies
- Missing deadlines and follow-up dates
- Scattered notes and spreadsheets
- No visibility into application progress

For Recruiters:

- Overwhelmed by application volume
- Disorganized candidate tracking
- No analytics on hiring pipeline
- Manual document management

> **"The average job seeker applies to 50+ jobs but loses track within a week"**

SLIDE 3: Solution Overview

Our Solution: Job Tracking System

A **unified platform** connecting job seekers, recruiters, and admins

Key Capabilities:

- **Track** job applications with status updates
- **Build** professional resumes with structured sections
- **Apply** to jobs through integrated portal
- **Analyze** hiring metrics with visual dashboards
- **Extract** skills from job descriptions

User Roles:

| Role | Purpose |

|------|---------|

| Job Seeker | Track apps, build resumes, apply for jobs |

| Recruiter | Post jobs, review candidates, analytics |

| Admin | Manage users, oversee platform |

SLIDE 4: Tech Stack

Technologies Used

Frontend

- **React 19** - Component-based UI library
- **React Router** - Client-side navigation
- **Chart.js & Recharts** - Data visualization
- **Axios** - HTTP client for API calls

Backend

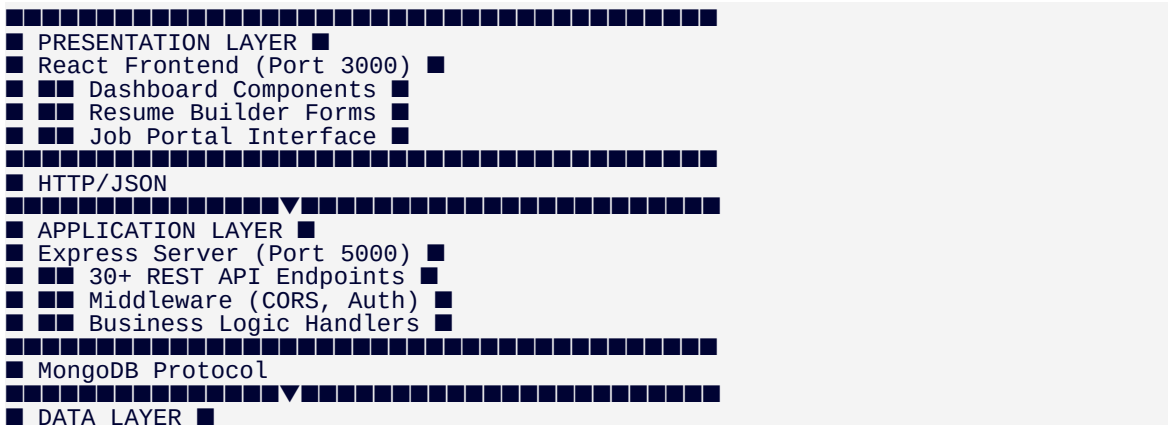
- **Node.js** - JavaScript runtime
- **Express.js** - Web framework for REST APIs
- **MongoDB Driver** - Database connectivity

Database

- **MongoDB Atlas** - Cloud-hosted NoSQL database
- 6 collections with optimized indexing

SLIDE 5: System Architecture

3-Tier Architecture



```
■ MongoDB Atlas (Cloud) ■
■ ■■ users, jobs, resumes ■
■ ■■ job_postings, applications ■
■■■
```

• **6 Structured Sections:**

Personal Information

Professional Summary

Work Experience (multiple entries)

Education History

Skills (tag-based)

Projects Portfolio

Job Portal Module

For Recruiters:

- Create job postings with requirements
- Review applicants with documents
- Update application status (accept/reject)
- View hiring analytics

For Job Seekers:

- Browse available positions
- Apply with resume + cover letter
- Track application status
- Withdraw applications

SLIDE 8: Core Modules (Part 3)

Admin, File Upload & Skill Analysis

Admin Module

- View all users and job postings
- Delete users (cascades to their data)
- Manage platform content
- View system-wide statistics

File Upload Module

- Base64 encoding for storage
- Resume and cover letter attachments
- 10MB size limit
- Retrieval for recruiter review

Skill Analysis Module

- Keyword-based skill extraction
- 40+ predefined skills database
- Contextual analysis (remote → "Remote Collaboration")
- Gap identification for job seekers

SLIDE 9: API Design

Major Endpoints

Authentication

| Method | Endpoint | Purpose |

|--------|----------|---------|

| POST | /signup | User registration |

| POST | /login | User authentication |

Job Management

| Method | Endpoint | Purpose |

|--------|----------|---------|

| POST | /jobs | Add application |

| GET | /jobs | List applications |

| PUT | /jobs/:id | Update application |

| DELETE | /jobs/:id | Delete application |

Job Portal

| Method | Endpoint | Purpose |

|--------|----------|---------|

| POST | /create-job-posting | Recruiter posts job |

| POST | /apply-job | Seeker applies |

| PATCH | /job-applications/:id/status | Recruiter decision |

SLIDE 10: Database Design

MongoDB Collections

| Collection | Purpose | Key Fields |

|------------|---------|------------|

| **users** | Authentication | username, password, role |

| **jobs** | Personal job apps | user_id, company, role, status, deadline |

| **resumes** | Resume builder data | user_id, personalInfo, experience[], skills[] |

| **job_postings** | Recruiter listings | recruiter_id, position, company, requirements[] |

| **job_applications** | Portal applications | user_id, job_id, resume_attachment, status |

| **job_seeker_resumes** | Uploaded files | user_id, name, file_content (base64) |

Indexing Strategy

- `users.username` → Unique index
- `jobs.user_id` → Query optimization

- `job_applications.user_id` & `job_id` → Fast lookups

SLIDE 11: Key Features

What Makes This System Powerful

1. Visual Dashboard

- Charts showing application status distribution
- Deadline calendar with color coding
- Statistics cards (total, interviews, offers)

2. Resume Builder

- Multiple resume versions
- Dynamic section addition
- Professional structure

3. Job Portal

- Direct seeker-recruiter connection
- Document upload and review
- Real-time status updates

4. Analytics

- Recruiter hiring metrics
- Application conversion rates
- Pipeline visualization

5. Smart Features

- Skill extraction from descriptions
- Deadline reminders

• Company search integration

SLIDE 12: Demo Walkthrough

System in Action

Scenario: Job Seeker Journey

Sign up → Create account as job seeker
Build resume → Fill 6 sections with experience
Add job → Track Google application with deadline
Browse portal → Find matching positions
Apply → Upload resume + cover letter
Track progress → View status in dashboard

Scenario: Recruiter Journey

Post job → Create "Full Stack Developer" listing
Review applicants → View 20+ applications
Access documents → Download resumes
Make decisions → Accept/reject candidates
View analytics → Check conversion rates

SLIDE 13: Conclusion & Future Scope

Summary & Next Steps

Achievements

• Full-stack implementation with modern tech

- Multi-role architecture serving 3 user types
- 30+ REST APIs with proper validation
- 6 MongoDB collections with indexing
- File handling, analytics, and skill extraction

Limitations

- Passwords stored as plaintext (needs hashing)
- No email notifications
- No real-time updates (WebSocket)
- Base64 storage (not optimal for scale)

Future Enhancements

- JWT authentication & password hashing
- Email/SMS notifications
- AI-powered job matching
- LinkedIn integration
- Mobile app (React Native)
- Resume PDF export

THANK YOU

Speaker Notes (Timing Guide)

Slide	Duration	Key Points to Emphasize
1 (Title)	30 sec	Introduce yourself and project
2 (Problem)	1 min	Relate to audience's experience
3 (Solution)	1 min	Highlight 3 user roles
4 (Tech Stack)	1 min	Mention React, Node, MongoDB
5 (Architecture)	1 min	Walk through 3-tier diagram
6-8 (Modules)	2.5 min	Cover 7 modules briefly
9 (API)	1 min	Show RESTful design
10 (Database)	1 min	Highlight 6 collections
11 (Features)	1 min	Focus on dashboard & portal
12 (Demo)	1 min	Quick scenario walkthrough
13 (Conclusion)	1 min	Future enhancements

Total: ~10 minutes

Quick Reference: Project Stats

- **Lines of Code:** ~3,500+
- **API Endpoints:** 30+
- **Database Collections:** 6
- **React Components:** 22
- **User Roles:** 4
- **Development Time:** [Your time]
